APart DT150
TRANSFORMER

APart

The APart DT150 is a modular dual 100V transformer. It is used between regular amplifiers and constant-voltage load speakerlines (Public Address) like 50V, 70V and 100V.

The DT150 has 2 high quality toroidal transformers inside.

This dual transformer can be easily built-in in the 19" housing (Ref; MB19) and can be used in combination with the MB(R)150 and the SB(R)160.

Further the DT50 includes a compensation- and protection network. With the power selector you can choose between 150W in 4 Ohm or 90W in 4 Ohm.
